

Are VPNs something your ISP has promised?

Are VPNs something your ISP has implemented?

Are VPNs something your ISP understands?

The Promise of IP VPN

Today, few question the profound advantages of an IP-based Virtual Private Network. It's easy to understand why... an IP VPN offers a level of coverage, security, and cost-savings that few — if any — dedicated leased-lined deployments can match. In fact, the discussion has moved from "should we" to "how can we" deploy a VPN, using IP protocol.

Our online event will ANSWER the "how."

This revealing online panel discussion will unravel the **strategic and technological challenges and opportunities** IT professionals face as they deploy an IP-based VPN. You'll hear **three industry luminaries** explore the business opportunities an IP VPN offers companies today... the **technology needed** for a sound, secure and effective deployment... the advantages of a **fully managed, versus a "hybrid," or "home grown"** approach... the importance of **protecting your investment** by choosing suppliers and service providers that can scale as your VPN demands grow... and more.

Immediately following the presentations, you'll have the chance to **ask your questions** on IP VPNs in our **open Q&A forum**. You'll get answers to your technical questions on aspects of **IP VPN planning, design, deployment, and maintenance**.

Our Tech Center will SHOW you the "how"

Following the panelist presentation, you'll have the chance to visit — and navigate at your own pace — the **IP VPN Tech Center**. Here, you can review **eye-opening case studies**... get answers to the most **frequently asked questions**... learn about the latest **technology innovations** from **UUNET[®]** and **Lucent Technologies[™]**... and discover how these industry leaders can help you streamline your IP VPN deployment, while lowering costs.

In the **Tech Center**, you'll also have the opportunity to download your **FREE** copy of the insightful **Yankee Group white paper**, it's yours at no cost for attending — and sharing your insights on — **The Promise of IP VPNs**.
